## The AFSC's goal for this workshop is to:

- Educate Amador County landowners on the dynamics of vegetation management after treatment is performed
- Be able to identify common species that are treated, and how they react to treatment
- Describe techniques used to maintain vegetation after treatment

The AFSC wants landowners to understand that most species treated on a Fuel Break or Ingress/Egress project can sprout back vigorously, but there are ways to maintain the valuable work that is being done. Join us and learn how!

## Workshop supported by our partners at:
